A couple severe storms impacted extreme southeast Arkansas during the evening hours of September twenty second as a cold front swept across the region. Wind damage occurred in Chicot and Ashley Counties.				
(AR-Z075) CHICOT				
	09/25/11 16:42 CST		50K	Strong Wind (MAX 38 kt)
	09/25/11 16:42 CST		0	
CHICOT COUNTY --- 0.9 NW DERMOTT [33.53, -91.44]				
	09/25/11 19:36 CST		0	Hail (1.00 in)
	09/25/11 19:36 CST		0	Source: Emergency Manager
Quarter size hail fell in Dermott.				
CHICOT COUNTY --- 1.4 N HALLEY JCT [33.55, -91.38]				
	09/25/11 19:40 CST		0.25M	Thunderstorm Wind (EG 78 kt)
	09/25/11 19:40 CST		0	Source: NWS Storm Survey
A severe thunderstorm produced a damaging downburst near the intersection of US Highways 65 and 165. A carport was ripped off a home, causing structural damage to the rear of the home, and numerous shingles were blown off the west side of the house. A large radio antenna was also blown over. At the same location, a large part of a roof of a commercial building was blown off. In the nearby vicinity, a billboard sign was snapped and blown over, a small carport was flipped and blown across a road, and a fence and three empty eighteen wheeler trailers were pushed over. Additionally, a number of trees were snapped and uprooted. All of the damage was laid out from northwest to southeast and appeared straight line in nature. Maximum winds were estimated at 90 mph.				
CHICOT COUNTY --- 0.9 NW DERMOTT [33.53, -91.44]				
	09/25/11 20:00 CST		15K	Thunderstorm Wind (EG 50 kt)
	09/25/11 20:00 CST		0	Source: Emergency Manager
Trees and power lines were blown down in Dermott.				
CHICOT COUNTY --- 0.9 NW DERMOTT [33.53, -91.44]				
	09/25/11 20:03 CST		0	Hail (0.88 in)
	09/25/11 20:03 CST		0	Source: Law Enforcement
ASHLEY COUNTY --- 1.5 NNE NORTH CROSSETT [33.17, -91.94]				
	09/25/11 20:47 CST		3K	Thunderstorm Wind (EG 50 kt)
	09/25/11 20:47 CST		0	Source: Law Enforcement
A few trees were blown down in North Crossett.				

Storm Data and Unusual Weather Phenomena - September 2011

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
ASHLEY COUNTY --- 2.8 S SOUTH CROSSETT [33.08, -91.97]				
	09/25/11 21:10 CST		0.20M	Thunderstorm Wind (EG 55 kt)
	09/25/11 21:10 CST		0	Source: Fire Department/Rescue

	09/05/11 20:35 CST		0	Source: Law Enforcement

Water rising out of the banks of Squirrel Branch and Richland Creeks flooded several homes, and crossed Old Highway 49 near Richland.

Tropical Depression 13 formed on the evening of September 1, 2011 about 225 miles southwest of the mouth of the Mississippi River with maximum sustained winds of 35 mph. The depression moved very slowly, around 2 mph, across northern portions of the Gulf of Mexico. Through mid day on the 2nd, Tropical Depression 13 remained mostly stationary over the northern Gulf of Mexico, drenching Louisiana with several inches of rain. Around 1 pm on the 2nd, the depression was found to have strengthened to Tropical Storm strength by both Air Force Hurricane Hunter aircraft and local observations on oil rigs, becoming the 12th named storm of 2011. Tropical Storm Lee as it was named, had moved little and was located about 210 miles to the southwest of the mouth of the Mississippi River. Maximum sustained winds of 40 mph were found with the newly named tropical storm and a minimum central pressure of 1003 mb.

Lee continued to move very slowly on the 2nd and 3rd, while heavy rain and strong winds continued to lash southern Louisiana. By mid day on the 3rd, Lee stalled south of the Louisiana coast with sustained winds around 60 mph. Lee continued to meander just along or south of the Louisiana coast through the remainder of the day on the 3rd. During the early morning hours of the 4th, Tropical Storm Lee finally made landfall near Vermillion Bay, LA, with maximum sustained wind speeds of 45 mph. However, Lee was still moving very slowly to the north northeast, dumping large quantities of rain and spawning tornadoes across portions of southern Louisiana, southeastern Mississippi and other portions of the Gulf Coast.

As the center of Lee continued to trek northward, heavy rain bands spiraled across much of central Mississippi producing significant flooding issues. Rainfall amounts of 4 to 10 inches were common across the NWS Jackson County Warning Area, with a few locations reporting amounts of 10 to 13 inches. Significant flash flooding was reported in the Jackson metro area, along with a few locations in southern Mississippi. Reports from emergency manager officials indicated that at least 50 homes, 60 apartment units and several other buildings were flooded by Monday morning. Numerous vehicles in the Jackson area were flooded, primarily in low-lying parking spots. Dozens of roads and bridges were washed out in central Mississippi. U.S. Highway 80 and Interstate 20 east of Jackson were both closed due to high water. Locations in the Mississippi Delta, northeast Louisiana and southeast Arkansas saw the least amount of rainfall, with amounts generally ranging from one half of an inch to 2 inches. Rivers responded to the large volume of rain, with many points on the Pearl River rising to minor to low-end moderate flooding. Other smaller creeks also came close to flood stage.

In addition to the significant rainfall and flooding, tornadoes also occurred with Tropical Storm Lee. Four confirmed tornadoes occurred in the Jackson County Warning Area. As is the case with most tropical systems, these tornadoes were very brief and fairly weak. Much of the damage was EF-0 type damage, with mostly trees and limbs coming down. The strongest tornado was rated EF-1 near Collins, MS. Some structural damage occurred along with tree damage. This tornado tracked for 3 miles with maximum estimated winds at 90 mph.

Around 10pm on September 4th, Lee was downgraded to a Tropical Depression with maximum sustained winds of 35 mph. However, these winds were occurring well to the south and southeast of the center out over the Gulf of Mexico. The weakened cyclone was located about 55 miles to the west southwest of McComb, MS. The remnants of Lee got caught up with an approaching cold front and moved quickly to the northeast, dumping rainfall on the Mid-Atlantic region that was doused by Hurricane Irene only a week prior.

Select rainfall totals(inches) from across central Mississippi include Florence, MS(13.55), Forest, MS(12.82), Walnut Grove(12.59), 8mi south Philadelphia, MS(12.03), 5mi east Philadelphia, MS(12.00), 8mi west southwest Hattiesburg, MS(11.64), Prentiss, MS(11.33), and at the Jackson International Airport(11.15).

Storm Data and Unusual Weather Phenomena - September 2011

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
	09/25/11 19:04 CST		2.50M	Tornado (EF1, L: 7.66 mi , W: 800 yd)
	09/25/11 19:16 CST		0	Source: NWS Storm Survey

The tornado started out producing a relatively narrow path of tree damage along Township Road. It moved southeast through the Stanton subdivision, heavily damaging four trailer homes and caused minor to moderate damage to several other homes and outbuildings. It continued to move southeast causing tree damage, and widened as it moved into the northwest side of the city of Cleveland. As the tornado moved through the north side of Cleveland, it snapped and uprooted numerous trees, blew the signs out of several restaurants and stores, blew the doors out of the automotive area of a department store, and blew out a wall and a large part of a roof of another commercial building. Several homes suffered shingle damage and power lines were downed. The tornado then turned more eastward, continuing to cause tree damage as it moved along and just north of State Highway 8 east of Cleveland. Additional power lines were downed and a few more homes suffered minor roof damage due to wind or branches falling on them. As the tornado crossed into Sunflower County it moved more southeast again. It snapped several wooden power poles along and just south of Highway 8 along Mallette-Jones Road, along with destroying a greenhouse type structure and causing some roof damage to a frame home. The tornado continued to cause tree damage in a relatively narrow path as it crossed Walker Road, and then dissipated before reaching Lusk Road. Maximum wind speeds were estimated at 100 mph.

SUNFLOWER COUNTY --- 2.0 NW DOCKERY [33.75, -90.66], 0.6 SSE DOCKERY [33.72, -90.63]

09/25/11 19:16 CST	0.20M	Tornado (EF1, L: 2.57 mi , W: 800 yd)

09/26/11 02:56 CST	50K	Lightning
09/26/11 02:56 CST	0	Source: Emergency Manager

Lightning struck a house on Dogwood Drive in Bovina, resulting in a fire.

An anomalous early autumn storm system brought severe weather to portions of the ArkLaMiss. Tornadoes, damaging winds and large hail occurred in the ArkLaMiss Delta during the evening hours of September twenty fifth. The most significant damage occurred in Cleveland, MS where a tornado damaged portions of a subdivision as well as a Walmart and Sears. The line of storms tracked very slowly to the south and east, causing numerous trees to fall across the Delta as well as flash flooding. Another tornado moved over Sunflower County near Drew. An agricultural pivot was flipped over and a few trees and power lines were blown down.
